

Jason Keung

I'm a UK born Chinese currently studying an **MEng in Electronic and Information Engineering** at Imperial College London. Highly self-driven, my interest in technology is broad and intense with particular interest on music technology, cinematography, photography and computer hardware.

If you would like to know a little about the qualifications and experience gained through my degree, click [here](#). Long story short, there is focus on C++, low level programming (ARM, MIPS) and digital hardware design (Verilog).

I am also very passionate with front-end development. Being self-taught in modern scripting languages (HTML/CSS/JavaScript), I have gained much knowledge on web UI-UX design that helps develop skills to become a full-stack engineer.

I'm currently looking for a **6 month placement** as part of my university degree, starting 2021. Whether it be small start-ups to large conglomerates, I am flexible and well fitted in working with groups and alone. Full of passion all things tech related, I strive to learn more and do more. If you are interested in hiring please don't hesitate to contact me.
